OWNER CONTROL ROOM FOR INDIAN RETAIL

Dukan Drishti

Plain answers for shop owners, with the reason attached

Sairam Saladi

GitHub: 25A31A05GA · dukan-drishti.vercel.app

80

tests passing

231

products in the sample shop

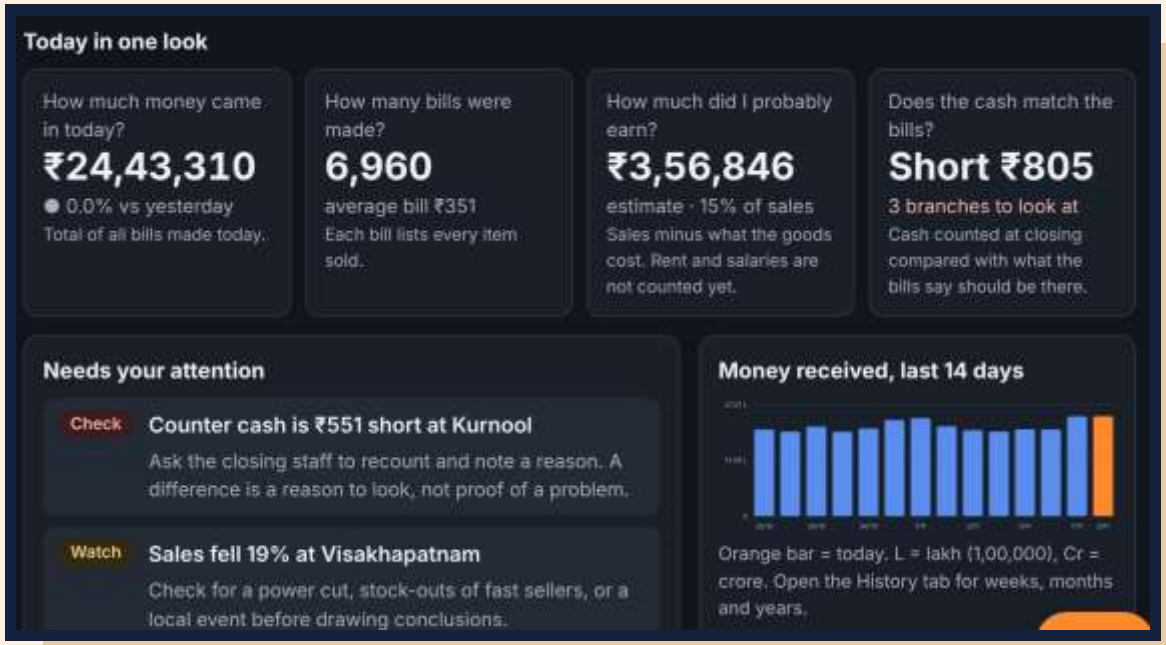

0

dependencies, pure Python

THE PROBLEM

One owner, many bills

- An owner cannot watch every branch
- Reports come late and need an accountant
- "Sales fell" never says why
- Offers, suppliers and cash feel like guesses

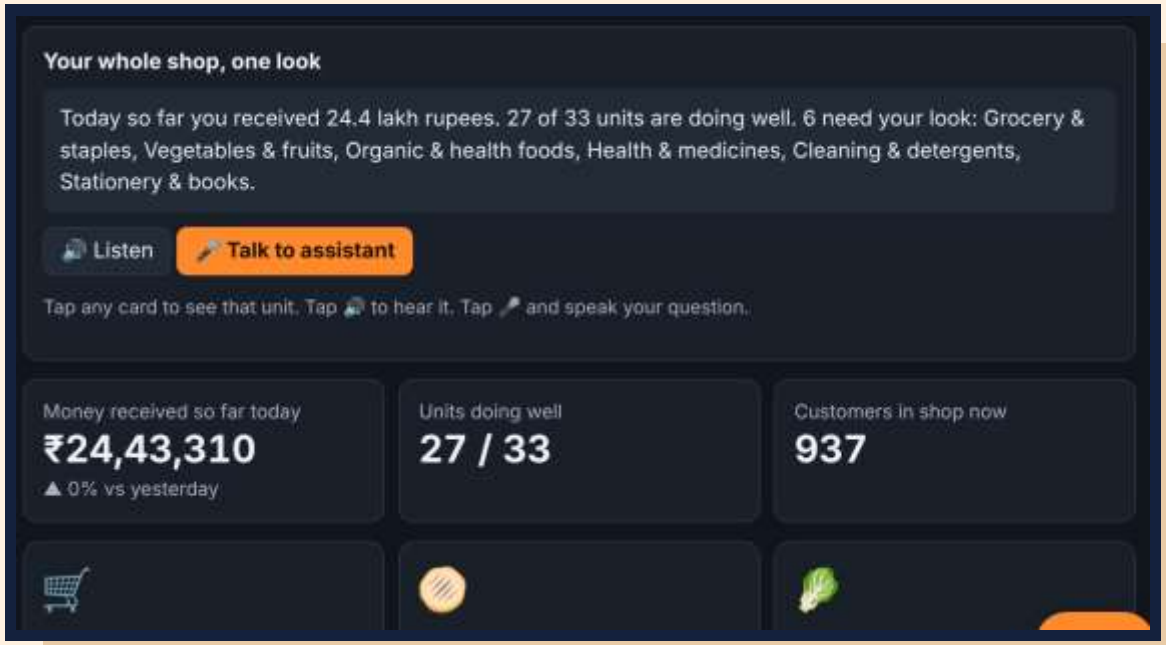

Screen: Today in one look

THE IDEA

Short answers, with a reason

- Looks at sales, stock, credit and cash
- Gives Good, Watch or Check
- Says why, and what it does NOT prove
- Works for a kirana or a 100-store chain

Screen: All units at a glance

WHO SEES WHAT

Seven roles

- Chairman sees every number
- Branch manager: own branch, no supplier dues
- Cashier: own counter only
- Auditor can look, never change

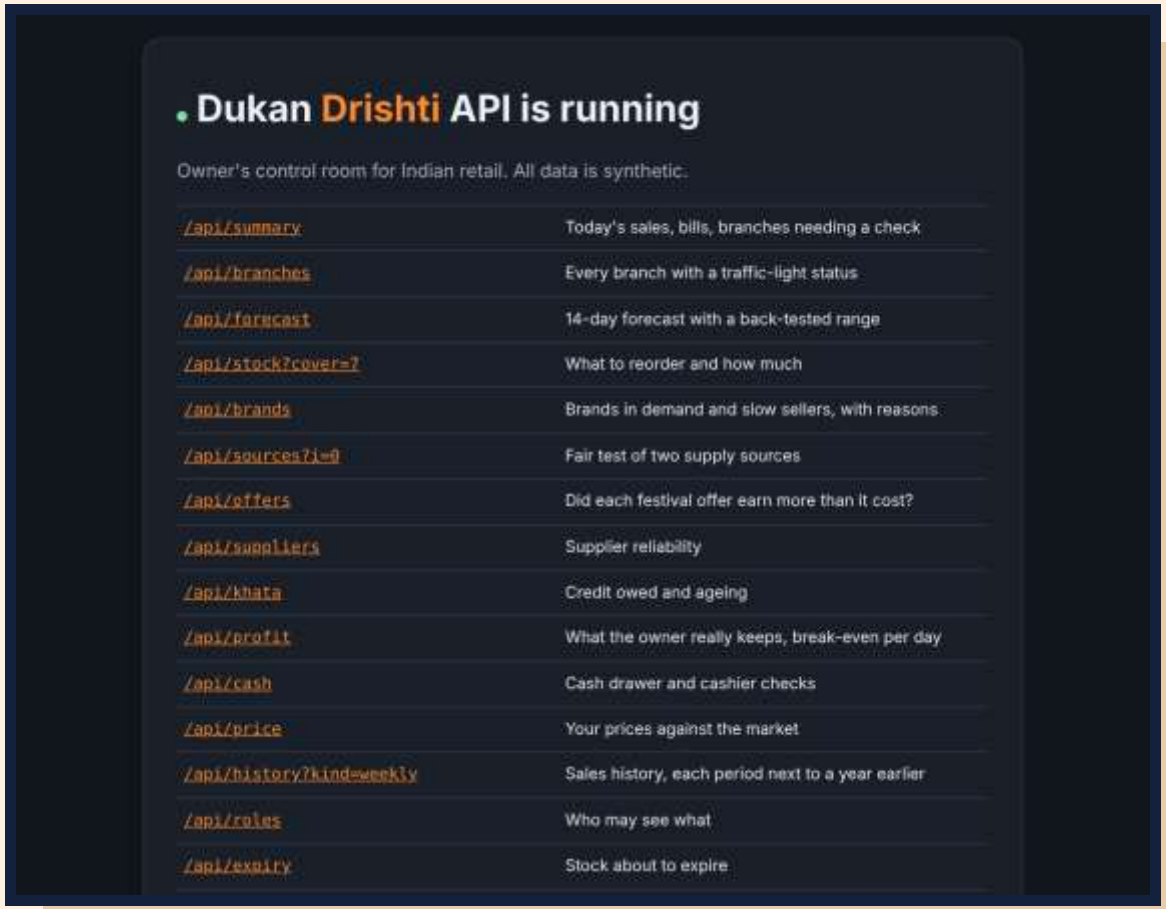

Screen: Choose who is signed in

UNDER THE HOOD

Built in pure Python

- Nothing to install: standard library only
- One rule set shared with the dashboard
- Command line and REST API
- Styled page for browsers, JSON for programs

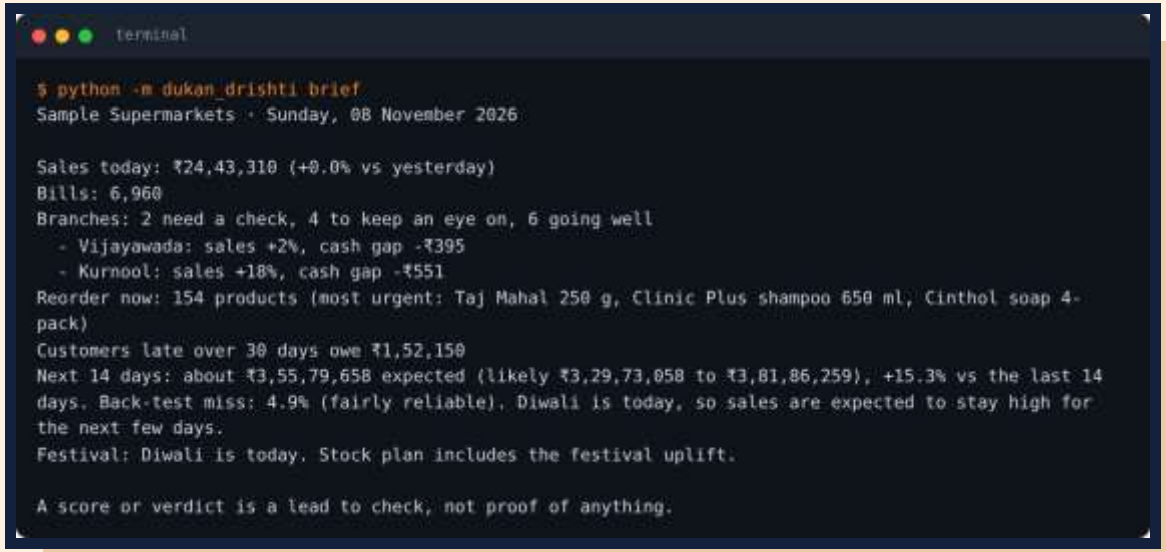

Screen: The API home page

EVERY MORNING

The 30-second brief

- Sales today and change vs yesterday
- Branches that need a check
- Products to reorder first
- Late credit and the next 14 days

Screen: python -m dukan_drishti brief

FORECAST

It shows its own error

- Predicts 14 days with a likely range
- Tested on the last 14 days
- No forecast with under 8 weeks of data
- Small shop? Labelled "rough guide"

Screen: 14-day forecast

6.2%
12 stores miss

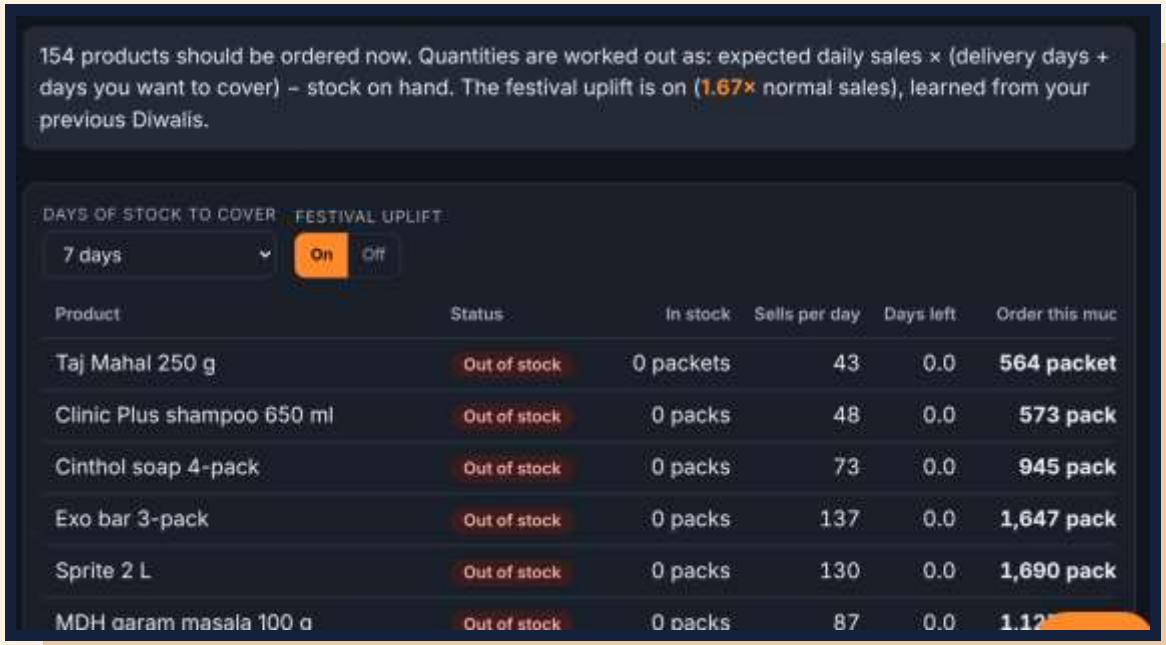

6.0%
chain miss

12.3%
one kirana

STOCK

What to order, and how much

- Daily sales × (delivery + cover) − stock
- Diwali uplift of about 1.67×
- 154 of 231 products flagged on Diwali
- Horlicks: 1 packet left, order 1,965

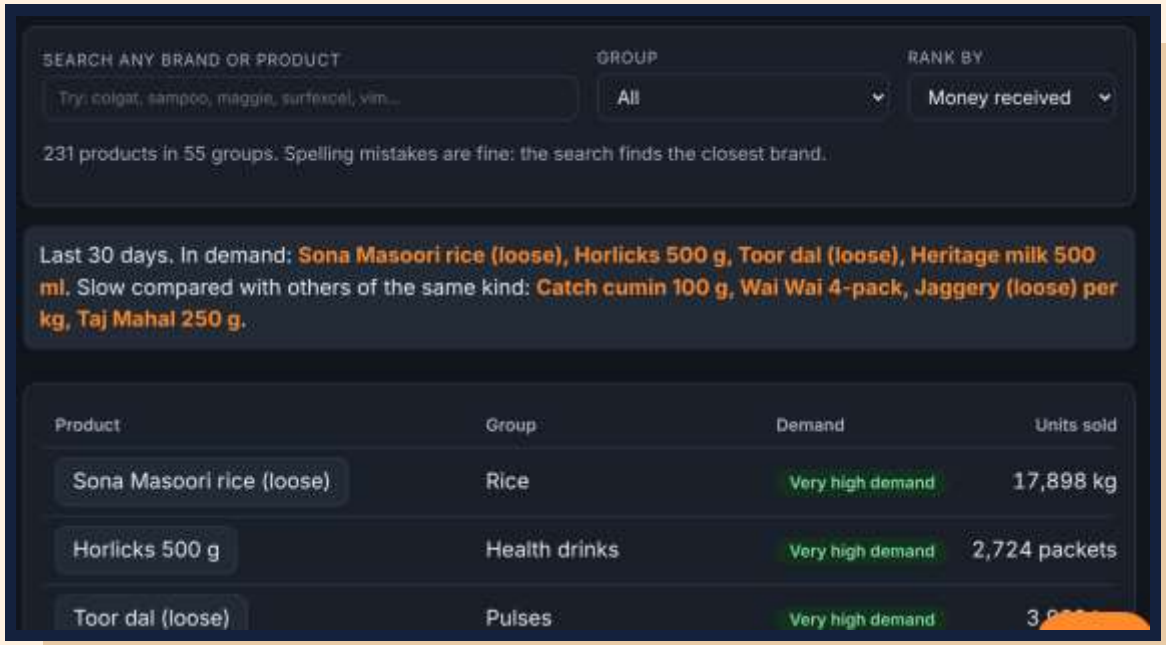

Screen: Stock and reorder

BRANDS

Which brand sells, and why

- Verdict plus the reasons
- Price gap, stock-outs, offer days
- Slow does not mean bad
- Compared inside its own group

Screen: Brands and products

CASE STUDY

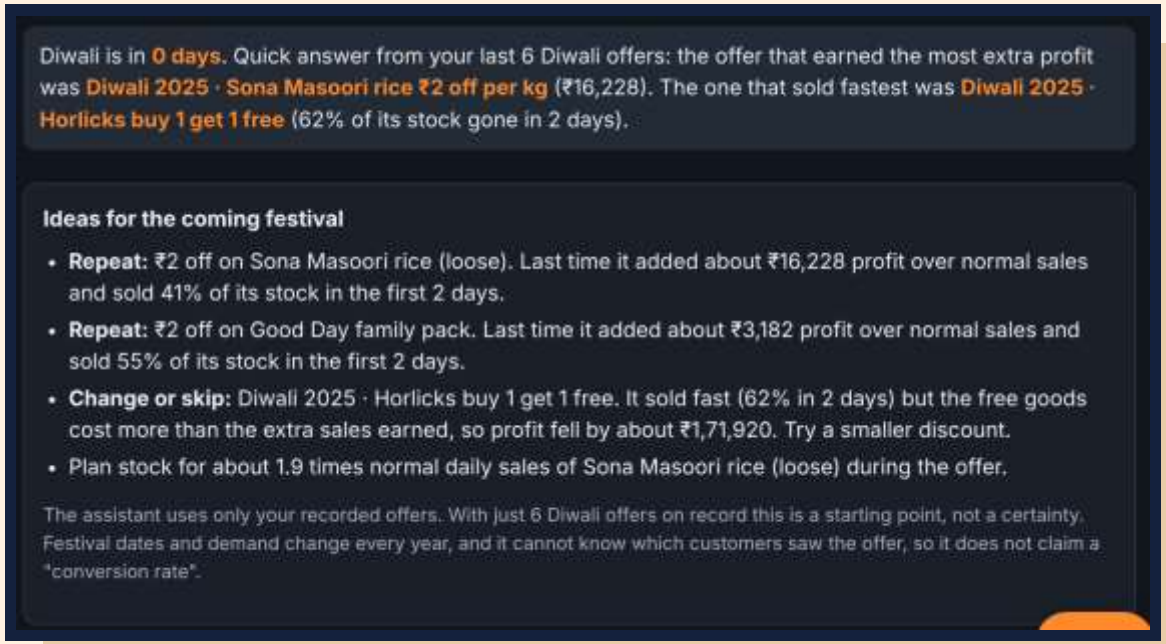

The offer that lost money

- Diwali 2025, Horlicks buy 1 get 1
- Sold about 1,017 extra packets
- Free packets cost ₹1,77,640
- "Sold out" is not "earned money"

1,017
extra packets

₹1.78 L
free goods

–₹1.72 L
net profit

Screen: Offers and festivals

FAIR TEST

Better rice, or just cheaper?

- Andhra rice sells 63% more
- But it is 5% cheaper
- And the other was out of stock
- Verdict: other reasons, not proof

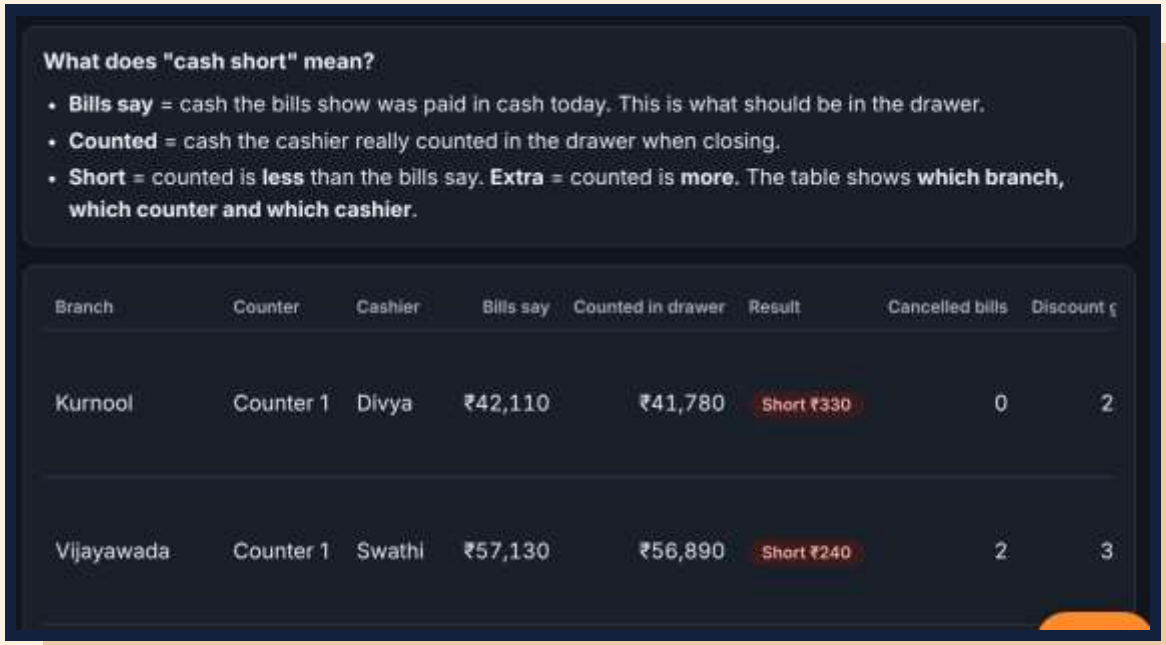

Screen: Regional source test

CASH

The drawer that is short

- Kurnool, Counter 1: short ₹330
- Shows branch, counter, cashier
- May mean change error or a cancelled bill
- A lead to check, never blame

Screen: Cashiers and cash

CREDIT

Who owes the shop

- ₹2,58,960 owed by 14 customers
- 59% is over 30 days late
- Oldest first
- Ready WhatsApp reminder

₹2.59 L
owed

59%
over 30 days

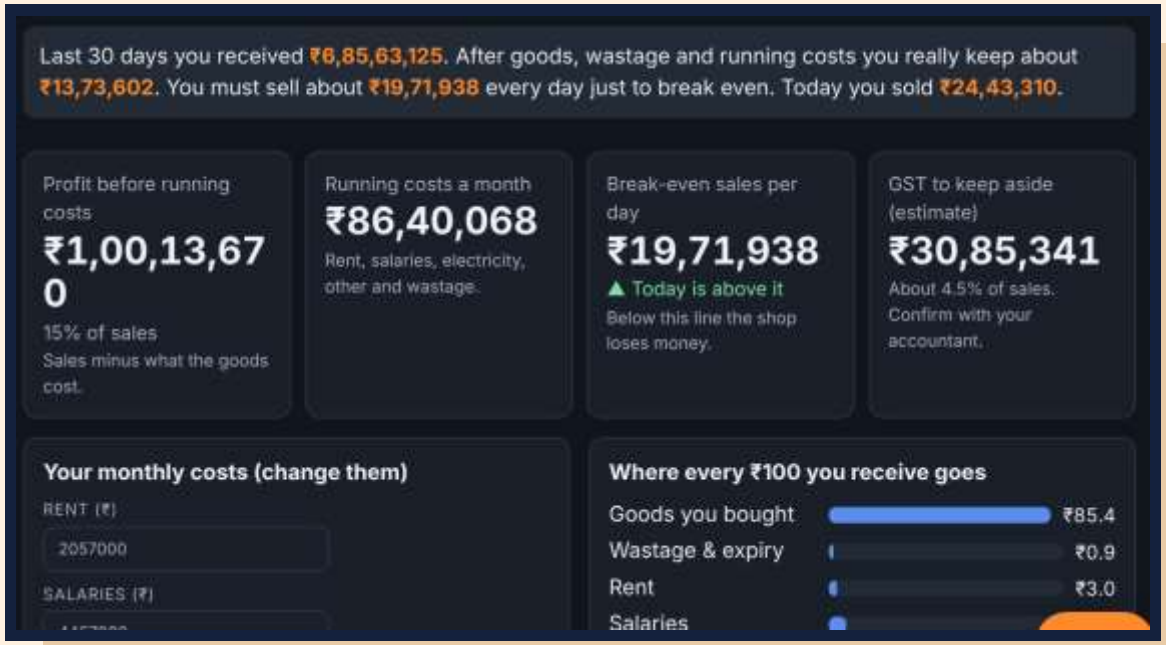

14
customers

Screen: Credit (khata)

PROFIT

What the owner really keeps

- About ₹13.7 lakh kept in 30 days
- Break-even ₹19.7 lakh a day
- GST to set aside: ₹30.9 lakh
- Today is above break-even

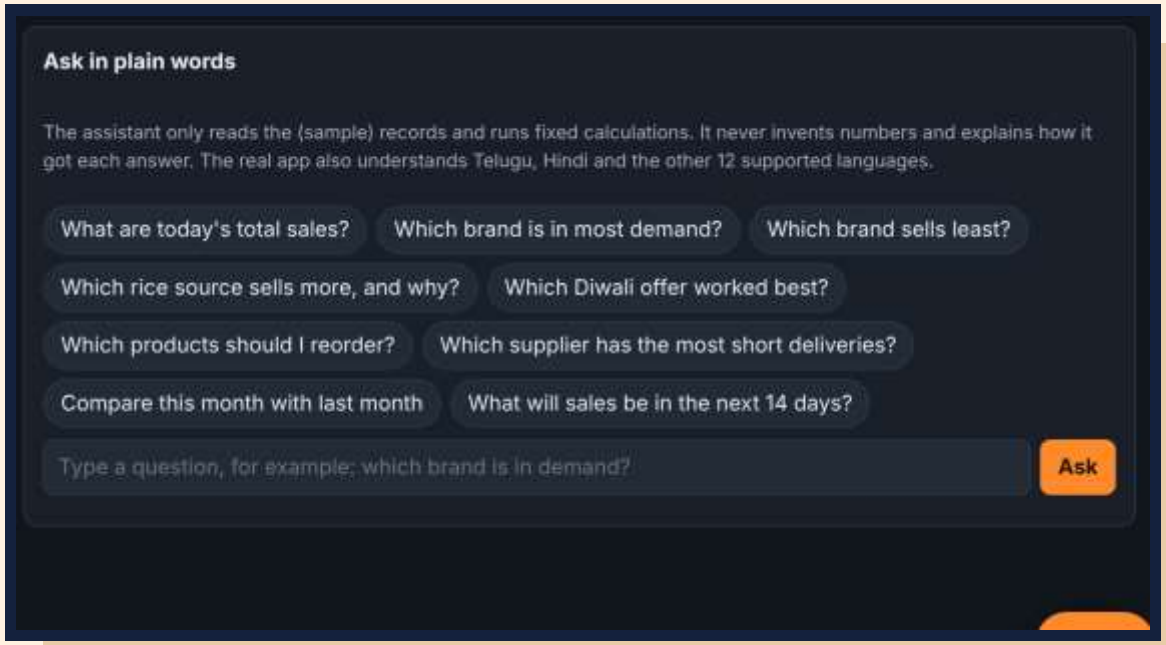

Screen: Profit and costs

ASK

Plain words, typo friendly

- Ask "which brand sells least"
- Finds "horlix" as Horlicks
- Right product in top 3: 95.3%
- Random letters wrongly matched: 1.25%

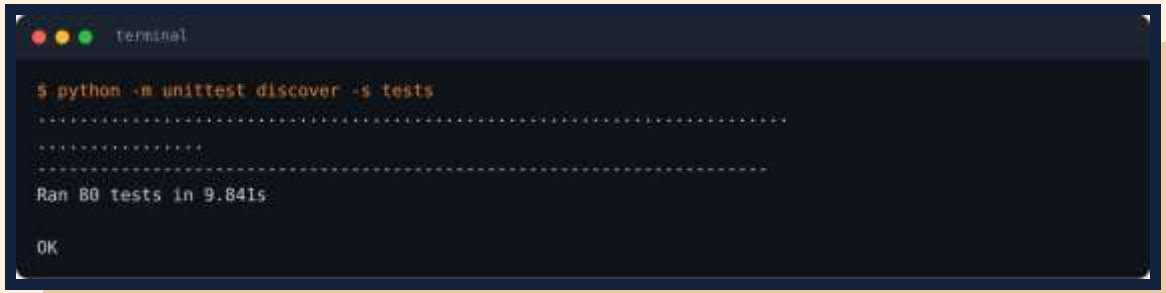

Screen: Ask the assistant

PROOF

How I know it is right

- Python compared with the dashboard's own JavaScript
- Matches to 12 decimals
- Screens match what the dashboard prints
- 80 tests, about 10 seconds

Screen: 80 tests, all passing

HONESTY

What went wrong

- Dashboard has 231 products, not 18
- My first search fix cut accuracy to 77.3%
- Re-ran the test, fixed it, back to 86.5%
- I corrected my own wrong claim

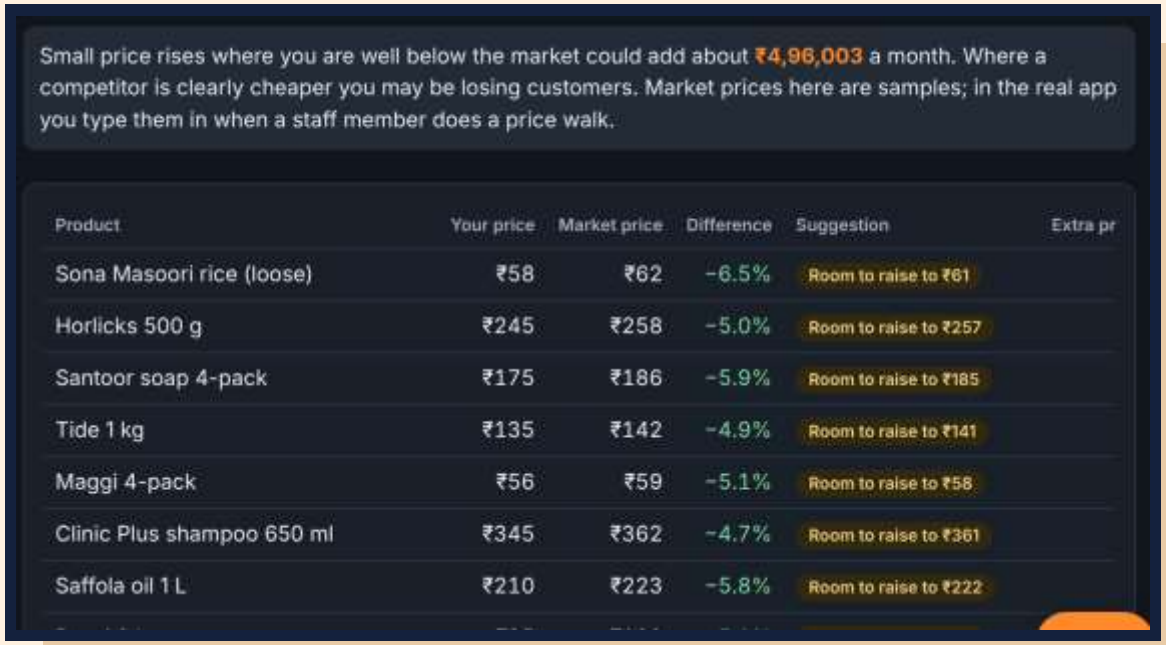

Screen: python -m dukan_drishti bench

CASE STUDY

Room to raise a price

- Sona Masoori: ₹58 vs market ₹62
- You are 6.5% below the market
- Raise to ₹61: about ₹53,694 a month
- Raise ₹1 first, then watch

Screen: Price watch

Said out loud

Limits

- Sample data only
- Not tested on a real shop
- No login or database yet

Next

- Import real bills from CSV
- SQLite storage
- Telugu and Hindi in Python
- WhatsApp morning brief

Thank you
